

Did You Know...?

Spring is almost here, and all Bernards Township school lawns and athletic fields have been designated "Pesticide Free Zones". Continuing the approach we adopted in the beginning of 2009, this means that school lawns and athletic fields will be cared for without the use of lawn care pesticides since these chemicals carry health risks for children. You may sometimes also hear this process referred to as "organic lawn care" which is a more active form of pesticide free lawn care appropriate for residential lawns. This designation also serves to align school lawn and athletic field care with the pesticide free process used by Bernards Township in our parks and recreation fields as instituted by the Township Committee in 2008 and backed by a Board of Health resolution in 2009. The Board of Education would like all parents to consider joining the effort on their home lawns, and to learn more please click [here](#).
