

Bernards Township School District

October 30, 2020

Dear Parents/Guardians and Staff Members,

The health and safety of our school students and district staff is our priority. To that end, this letter is to inform all district families and staff members that we have been advised by the Bernards Township Health Department that one student at Liberty Corner School has a laboratory confirmed case of Coronavirus Disease 2019 (COVID-19). In addition, the Bernards Township Health Department has advised that a second student at Liberty Corner School has been identified as a presumed positive case. The District is coordinating closely with public health officials and following CDC, state, and local health department guidance in order to assure the health and safety of our community. Cleaning and disinfecting of any exposed areas will be conducted as needed.

Further communication, pursuant to local health department guidance, will only be issued if there is a need to close schools or suspend in-school instruction. At this time, the Health Department has not identified any staff or students as close contacts through school related interactions. If necessary, communication will be issued to anyone identified by the health department as a close contact of the person that tested positive.

We understand the level of concern regarding COVID-19. We encourage parents, students, and staff to continue following the Centers for Disease Control & Prevention promoted safeguards, such as:

- Staying home when you are sick
- Washing hands often with soap for at least 20 seconds
- Covering coughs and sneezes and properly disposing of tissues
- Limiting close contact with people who are sick and not sharing food, drinks and utensils
- Practicing social distancing (staying at least 6 feet apart)
- Wearing a face covering
- Continuing to monitor your health for symptoms.

As always, we appreciate our community's support and cooperation. You can assist us by remaining vigilant but sensible in your approach to dealing with this health concern. The following page of this message provides additional resources that you might find helpful. **If you have any questions or wish to discuss any health concerns, please contact your doctor, school nurse or your local health department.**

Information about this disease:

The CDC has stated that the COVID-19 virus is thought to spread mainly from person to person, between people who are in close contact with one another (within about 6 feet) for 15 minutes, cumulatively within 24hrs. The virus spreads through respiratory droplets produced when an infected person coughs, sneezes, or talks; these droplets can land in the mouths or noses of people who are nearby or possibly be inhaled into the lungs. COVID-19 may be spread by people who are not showing symptoms.

Symptoms of COVID-19:

People with COVID-19 have had a wide range of symptoms reported, ranging from mild symptoms to severe illness. Symptoms may appear 2-14 days after exposure to the virus. Symptoms may include the following:

- Fever or chills
- Cough
- Shortness of breath or difficulty breathing
- Fatigue
- Muscle or body aches
- Headache
- New loss of taste or smell
- Sore throat
- Congestion or runny nose
- Nausea or vomiting
- Diarrhea

Strategies to help combat the disease:

- Washing hands often
- Avoiding close contact
- Covering mouth and nose with a cloth face cover when around others
- Covering coughs and sneezes
- Cleaning and disinfecting frequently touched surfaces daily
- Monitoring your health daily

What we are doing:

- Monitoring the health of our school community
- Prioritizing social distancing
- Wearing face coverings and promoting hand washing and good hygiene
- Clean and disinfect our school buildings as per CDC Guidelines.
- We have been in touch with the Bernards Township Health Department and will follow their lead on providing notification and contact tracing. You may be contacted by health department officials.

What you can do at home:

- Stay home when sick
- Practice routine cleaning and disinfecting of frequently touched surfaces
- Wash hands often; use a hand sanitizer that contains at least 60% alcohol if soap and water are not readily available and hands are not visibly dirty
- Wear a face covering when you go out
- Keep 6 feet of distance between you and others
- If you or your child has any symptoms of this disease, call your doctor to find out what to do.
- Talk to your doctor about this notice.
- Consider testing. Testing helps public health officials identify if others are at risk of being exposed to the virus.
- If you do not have a regular doctor to care for your child or yourself, contact your local health department for instructions on how to find a doctor.
